Class 10 | GSEB | Science

Ch 6 Test (GSEB pattern): Control and Coordination

Chapter / Topic: Control and Coordination

Name: _____ Roll No.: _____ Date: _____

Time: 50 minutes **Max. Marks: 25**

General instructions:

1. All questions are compulsory.
2. Section A: objective questions, 1 mark each. Section B: 2 marks each. Section C: 3 marks each. Section D: 4 marks.
3. Write balanced equations and draw neat, labelled diagrams wherever needed.

SECTION A

9 marks

Choose the correct option.

Q1. Which of the following is a plant hormone? **[1]**

(a) Insulin (b) Cytokinin
(c) Thyroxin (d) Oestrogen

Q2. Which part of the brain controls voluntary actions? **[1]**

(a) Cerebrum (forebrain) (b) Medulla
(c) Spinal cord (d) Pons

Q3. The gap between two neurons is called a: **[1]**

(a) dendrite (b) axon
(c) synapse (d) impulse

Q4. Which of these is an example of chemotropism? **[1]**

(a) A pollen tube growing towards the ovule
(b) A shoot bending towards light
(c) Roots growing downwards
(d) Leaves of touch-me-not folding

Q5. The brain is responsible for: **[1]**

(a) thinking (b) regulating the heartbeat
(c) balancing the body (d) all of the above

Q6. Growth hormone is secreted by the: **[1]**

(a) thyroid gland (b) adrenal gland
(c) pituitary gland (d) pancreas

Q7. Which hormone regulates the blood sugar level? **[1]**

(a) Adrenaline (b) Insulin
(c) Thyroxin (d) Growth hormone

Q8. Reflex arcs are formed in the: **[1]**

(a) brain (b) heart
(c) muscles (d) spinal cord

Q9. The bending of a plant shoot towards light is called: **[1]**

(a) geotropism (b) phototropism
(c) hydrotropism (d) chemotropism

SECTION B

6 marks

Q10. What is a reflex action? Give two examples. **[2]**

Q11. What is the function of receptors in our body? What could happen if they do not work properly? **[2]**

Q12. Why is adrenaline called the 'emergency hormone'? Give two of its effects on the body. **[2]**

SECTION C

6 marks

Q13. Answer the following about a neuron: **[3]**

- **(i)** In which part of a neuron is information first acquired? **[1]**
- **(ii)** Through which part does the information travel as an electrical impulse? **[1]**
- **(iii)** How is the impulse passed on to the next neuron? **[1]**

Q14. Name the gland: **[3]**

- **(i)** found on top of each kidney. **[1]**
- **(ii)** in the neck, which needs iodine to make its hormone. **[1]**
- **(iii)** that produces digestive enzymes as well as a hormone. **[1]**

SECTION D

4 marks

Read the passage and answer the questions that follow.

Q15. A student placed a potted plant near a window for a week. The shoot bent towards the window, while the roots grew downwards. The student read that a hormone made at the shoot tip diffuses towards the shaded side of the shoot. This makes the cells on that side grow longer, so the shoot bends towards light. **[4]**

- **(i)** Name the response of the shoot towards light. **[1]**
- **(ii)** Name the hormone involved, and say where it is made. **[1]**
- **(iii)** Explain why the shoot bends towards light. Name the response of the roots to gravity. **[2]**

~ All the best! ~
