Class 10 | GSEB | Science

Ch 7 Test (GSEB pattern): How do Organisms Reproduce?

Chapter / Topic: How do Organisms Reproduce?

Name: _____ Roll No.: _____ Date: _____

Time: 50 minutes **Max. Marks: 25**

General instructions:

1. All questions are compulsory.
2. Section A: objective questions, 1 mark each. Section B: 2 marks each. Section C: 3 marks each. Section D: 4 marks.
3. Write balanced equations and draw neat, labelled diagrams wherever needed.

SECTION A

9 marks

Choose the correct option.

Q1. Asexual reproduction takes place through budding in: **[1]**

(a) Amoeba (b) Plasmodium
(c) yeast (d) Leishmania

Q2. Multiple fission is seen in: **[1]**

(a) Amoeba (b) yeast
(c) Hydra (d) Plasmodium

Q3. Which of the following is NOT a part of the female reproductive system in human beings? **[1]**

(a) Ovary (b) Vas deferens
(c) Uterus (d) Fallopian tube

Q4. Which organism reproduces by fragmentation? **[1]**

(a) Spirogyra (b) Planaria
(c) Yeast (d) Plasmodium

Q5. The anther contains: **[1]**

(a) pollen grains (b) sepals
(c) ovules (d) pistil

Q6. Which part of a flower develops into the fruit? **[1]**

(a) Ovule (b) Petal
(c) Stigma (d) Ovary

Q7. Planaria can grow a complete new organism from a cut body piece. This is called: **[1]**

(a) budding (b) spore formation
(c) regeneration (d) binary fission

Q8. The transfer of pollen grains from the anther to the stigma is called: **[1]**

(a) fertilisation (b) pollination
(c) germination (d) budding

Q9. Rhizopus (bread mould) reproduces by: **[1]**

(a) fragmentation (b) spore formation
(c) budding (d) binary fission

SECTION B

6 marks

Q10. What is the importance of DNA copying in reproduction? **[2]**

Q11. Give two advantages of sexual reproduction over asexual reproduction. **[2]**

Q12. Differentiate between self-pollination and cross-pollination. **[2]**

SECTION C

6 marks

Q13. Answer the following about events after fertilisation in a flower: **[3]**

- **(i)** What happens to the zygote? **[1]**
- **(ii)** What do the ovule and the ovary develop into? **[1]**
- **(iii)** What happens to the petals, sepals and stamens? **[1]**

Q14. Answer the following about puberty: **[3]**

- **(i)** Name the hormones responsible for the changes at puberty in boys and in girls. **[1]**
- **(ii)** Give two changes seen in both boys and girls at puberty. **[1]**
- **(iii)** Name the organs that produce these hormones. **[1]**

SECTION D

4 marks

Read the passage and answer the questions that follow.

Q15. A gardener wanted many rose plants with exactly the same flower colour as one prized plant. He cut small pieces of its stem with buds and planted them in moist soil. In another bed, he grew potato plants from pieces of potato that had 'eyes'. He also noticed that a Bryophyllum leaf lying on wet soil produced tiny new plants from the notches along its edge. **[4]**

- **(i)** Name the method used to grow the rose plants. **[1]**
- **(ii)** What are the 'eyes' of a potato? **[1]**
- **(iii)** Why do the new rose plants have the same flower colour as the parent? Give one limitation of this method. **[2]**

~ All the best! ~
