Class 10 | CBSE / GSEB | Science

Daily Practice: Ch 5 Life Processes

Chapter / Topic: Life Processes · Week 3 of the 90-day plan

Name: _____ Roll No.: _____ Date: _____

Marks obtained: _____

General instructions:

1. One day at a time, about 25 minutes each: Day 1 on the day you study the chapter, then Day 2 and Day 3. Write answers in your notebook and check them with the key the same day. Copy every mistake into your error log.
2. Biology answers need the right keywords. When you check, underline the keywords you missed.

DAY 1: NUTRITION

Q1. Which of these organisms is a parasite?

(a) Amoeba (b) mushroom
(c) Cuscuta (amarbel) (d) grass

Q2. The enzyme in saliva (salivary amylase) breaks down:

(a) proteins (b) starch
(c) fats (d) vitamins

Q3. Bile is made in the:

(a) liver (b) gall bladder
(c) pancreas (d) stomach

Q4. During photosynthesis, the oxygen given out comes from the splitting of:

(a) carbon dioxide (b) glucose
(c) chlorophyll (d) water

Q5. Describe, step by step, how Amoeba takes in and digests its food.

Q6. What is peristalsis? Why is it needed?

Q7. Give the function of: (a) the villi of the small intestine, (b) pancreatic juice, (c) the sphincter muscle at the exit of the stomach.

Q8. Desert plants such as cacti keep their stomata closed during the day to save water. How do they still carry out photosynthesis?

DAY 2: RESPIRATION AND TRANSPORT

Q9. In yeast, the anaerobic breakdown of pyruvate gives:

(a) lactic acid and energy
(b) carbon dioxide, water and energy
(c) ethanol, carbon dioxide and energy
(d) glucose and oxygen

Q10. The respiratory pigment haemoglobin is found in:

(a) red blood cells (b) plasma
(c) white blood cells (d) platelets

Q11. Which blood vessels have thick, elastic walls because the blood in them is under high pressure?

(a) veins (b) arteries
(c) capillaries (d) lymph vessels

Q12. The energy currency of the cell is:

(a) ADP (b) ATP
(c) glucose (d) pyruvate

Q13. What is lymph? Give two of its functions.

Q14. Why are the walls of capillaries only one cell thick?

Q15. What is blood pressure? Name the instrument used to measure it, and give the normal systolic and diastolic values.

Q16. Trace the path of a molecule of oxygen from the air you breathe in to a muscle cell in your leg.

DAY 3: EXCRETION, MIXED PRACTICE AND CHALLENGE

Q17. **Assertion (A):** Anaerobic respiration releases more energy than aerobic respiration.
Reason (R): In aerobic respiration, glucose is broken down completely into carbon dioxide and water.

(a) Both A and R are true, and R is the correct explanation of A.
(b) Both A and R are true, but R is not the correct explanation of A.
(c) A is true, but R is false.
(d) A is false, but R is true.

Q18. The basic filtration unit of the kidney is the:

(a) neuron (b) alveolus
(c) villus (d) nephron

Q19. Which of these is NOT a job of the kidneys?

(a) removing urea from the blood
(b) controlling the amount of water in the body
(c) making bile
(d) filtering the blood

Q20. To find out whether plants need carbon dioxide for photosynthesis, Meera took two similar de-starched potted plants, P and Q, and placed each under a bell jar sealed with vaseline. She put a watch glass of potassium hydroxide inside the jar over Q only. Both jars stood in sunlight for a few hours, and then a leaf from each plant was tested with iodine.

(i) Why was potassium hydroxide placed in the jar over Q?

(ii) Which leaf turned blue-black with iodine?

(iii) What does the result show?

Q21. (a) Give three differences between arteries and veins.
(b) What would happen if a person's blood had no platelets?
(c) A fish heart has only two chambers. How many times does the blood pass through the heart in one complete circuit of the fish's body?

Q22. A disease damages most of the villi in a person's small intestine. What effect would this have on the person, and why?

~ Biggest biology chapter, done in three days. Proud of you! ~
