LEVEL UP ACADEMY

Class 10 | CBSE / GSEB | Science

Daily Practice: Ch 6 Control and Coordination

Chapter / Topic: Control and Coordination · Week 3 of the 90-day plan

Name: _____ Roll No.: _____ Date: _____

Marks obtained: _____

General instructions:

1. One day at a time, about 25 minutes each: Day 1 on the day you study the chapter, then Day 2 and Day 3. Write answers in your notebook and check them with the key the same day. Copy every mistake into your error log.
2. Make a gland | hormone | function table in your notebook on Day 3. It is worth marks every single year.

DAY 1: THE NERVOUS SYSTEM

Q1. The hypothalamus is a part of the:

(a) fore-brain (b) mid-brain
(c) hind-brain (d) spinal cord

Q2. Involuntary actions such as blood pressure, salivation and vomiting are controlled by the:

(a) cerebrum (b) medulla
(c) cerebellum (d) spinal cord

Q3. Which part of a neuron carries the impulse away from the cell body?

(a) dendrite (b) synapse
(c) receptor (d) axon

Q4. Olfactory receptors detect:

(a) taste (b) smell
(c) light (d) sound

Q5. You touch a hot pan and pull your hand away at once. Trace the path of this reflex arc, from the stimulus to the response.

Q6. Name the two parts of the central nervous system. How is the spinal cord protected?

Q7. How does a nerve impulse make a muscle contract?

Q8. Name the part of the brain mainly involved in each action: (a) solving a maths problem, (b) walking in a straight line, (c) riding a bicycle smoothly, (d) your mouth watering when food is in it.

DAY 2: COORDINATION IN PLANTS

Q9. Which plant hormone helps the stem grow?

(a) cytokinin (b) abscisic acid
(c) insulin (d) gibberellin

Q10. Roots growing towards water is an example of:

(a) phototropism (b) geotropism
(c) hydrotropism (d) chemotropism

Q11. The tendrils of a pea plant coil around a support because:

(a) the part touching the support grows faster
(b) the tendril loses water
(c) the part away from the support grows faster
(d) the tendril bends towards light

Q12. Why is abscisic acid called a 'stress hormone'?

Q13. Describe a simple experiment to show hydrotropism.

Q14. A potted plant is laid on its side in a dark room for a few days. Describe what happens to the shoot and the root, and name each response. Why was the room kept dark?

DAY 3: HORMONES, MIXED PRACTICE AND CHALLENGE

Q15. **Assertion (A):** Hormones are released directly into the blood.
Reason (R): Endocrine glands do not have ducts.

(a) Both A and R are true, and R is the correct explanation of A.
(b) Both A and R are true, but R is not the correct explanation of A.
(c) A is true, but R is false.
(d) A is false, but R is true.

Q16. Thyroxin regulates the metabolism of:

(a) carbohydrates only
(b) proteins only
(c) carbohydrates, proteins and fats
(d) vitamins and minerals

Q17. A large amount of adrenaline is released into a person's blood. Which of these will NOT happen?

(a) The heart beats faster.
(b) Breathing becomes faster.
(c) More blood flows to the skeletal muscles.
(d) More blood flows to the digestive system.

Q18. Rahul is 13. His voice has started to crack and hair is growing on his face.

(i) Which hormone causes these changes, and which gland makes it?

(ii) Which hormone brings about the changes of puberty in girls, and which gland makes it?

(iii) Name two changes that happen in girls at puberty.

Q19. Make a table with three columns (gland, hormone, one function) for these five glands: thyroid, pancreas, adrenal, pituitary and testes.

Q20. After a serious injury, a man's spinal cord is cut in his neck. His leg muscles are healthy, yet he cannot move his legs. Explain why.

~ Week 3 done after this one. Halfway through biology. Keep going! ~
