Ch 7 Test: How do Organisms Reproduce?

Chapter / Topic: How do Organisms Reproduce?

Name: _____ Roll No.: _____ Date: _____

Time: 50 minutes **Max. Marks: 25**

General instructions:

1. All questions are compulsory. Internal choice is given in some questions.
2. Section A: 1 mark each. Section B: 2 marks each. Section C: 3 marks each. Section D: 5 marks. Section E: case-based, 4 marks.

SECTION A

6 marks

Choose the correct option.

Q1. Asexual reproduction takes place through budding in: **[1]**

(a) Amoeba (b) Plasmodium
(c) yeast (d) Leishmania

Q2. Which of the following is NOT a part of the female reproductive system in human beings? **[1]**

(a) Ovary (b) Vas deferens
(c) Uterus (d) Fallopian tube

Q3. The anther contains: **[1]**

(a) sepals (b) ovules
(c) pistil (d) pollen grains

Q4. Planaria can grow a complete new organism from a cut body piece. This is called: **[1]**

(a) budding (b) regeneration
(c) spore formation (d) binary fission

Q5. Rhizopus (bread mould) reproduces by: **[1]**

(a) fragmentation (b) budding
(c) spore formation (d) binary fission

Q6. **Assertion (A):** Variation is useful for the survival of a species over time.
Reason (R): If the environment changes drastically, some variants may be better able to survive. **[1]**

(a) Both A and R are true, and R is the correct explanation of A.
(b) Both A and R are true, but R is not the correct explanation of A.
(c) A is true, but R is false.
(d) A is false, but R is true.

SECTION B

4 marks

Q7. What is the importance of DNA copying in reproduction? **[2]**

OR

Give two advantages of vegetative propagation.

Q8. Differentiate between self-pollination and cross-pollination. **[2]**

SECTION C

6 marks

Q9. Answer the following about events after fertilisation in a flower: **[3]**

(i) What happens to the zygote? **[1]**

(ii) What do the ovule and the ovary develop into? **[1]**

(iii) What happens to the petals, sepals and stamens? **[1]**

Q10. Describe any three methods of contraception and how each works. **[3]**

OR

How does binary fission differ from multiple fission? Give one example of each.

SECTION D

5 marks

Q11. Answer the following about human reproduction: **[5]**

(i) Where are the eggs produced, where does fertilisation take place, and where does the embryo get implanted? **[3]**

(ii) How does the embryo get nourishment inside the mother's body? **[2]**

OR

(a) What is the role of the seminal vesicles and the prostate gland? [2]
(b) Why are the testes located outside the abdominal cavity? [1]
(c) Name two sexually transmitted diseases and one way to prevent them. [2]

SECTION E

4 marks

Read the passage and answer the questions that follow.

Q12. A gardener wanted many rose plants with exactly the same flower colour as one prized plant. He cut small pieces of its stem with buds and planted them in moist soil. In another bed, he grew potato plants from pieces of potato that had 'eyes'. He also noticed that a Bryophyllum leaf lying on wet soil produced tiny new plants from the notches along its edge. **[4]**

(i) Name the method used to grow the rose plants. **[1]**

(ii) What are the 'eyes' of a potato? **[1]**

(iii) Why do the new rose plants have the same flower colour as the parent? Give one limitation of this method. **[2]**

~ All the best! ~
