Ch 7 Test (Set B): How do Organisms Reproduce?

Chapter / Topic: How do Organisms Reproduce?

Name: _____ Roll No.: _____ Date: _____

Time: 50 minutes **Max. Marks: 25**

General instructions:

1. All questions are compulsory. Internal choice is given in some questions.
2. Section A: 1 mark each. Section B: 2 marks each. Section C: 3 marks each. Section D: 5 marks. Section E: case-based, 4 marks.

SECTION A

6 marks

Choose the correct option.

Q1. Multiple fission is seen in: **[1]**

(a) Amoeba (b) yeast
(c) Plasmodium (d) Hydra

Q2. Which organism reproduces by fragmentation? **[1]**

(a) Planaria (b) Yeast
(c) Plasmodium (d) Spirogyra

Q3. Which part of a flower develops into the fruit? **[1]**

(a) Ovary (b) Ovule
(c) Petal (d) Stigma

Q4. The transfer of pollen grains from the anther to the stigma is called: **[1]**

(a) fertilisation (b) germination
(c) budding (d) pollination

Q5. Which method of contraception also helps protect against sexually transmitted diseases? **[1]**

(a) Oral pills (b) Copper-T
(c) Condom (d) Surgical method

Q6. **Assertion (A):** A unisexual flower contains either stamens or a pistil, not both.
Reason (R): Papaya and watermelon have unisexual flowers. **[1]**

(a) Both A and R are true, and R is the correct explanation of A.
(b) Both A and R are true, but R is not the correct explanation of A.
(c) A is true, but R is false.
(d) A is false, but R is true.

SECTION B

4 marks

Q7. Give two advantages of sexual reproduction over asexual reproduction. **[2]**

OR

What are bisexual and unisexual flowers? Give one example of each.

Q8. Why does the lining of the uterus become thick and spongy every month? **[2]**

SECTION C

6 marks

Q9. Answer the following about puberty: **[3]**

(i) Name the hormones responsible for the changes at puberty in boys and in girls. **[1]**

(ii) Give two changes seen in both boys and girls at puberty. **[1]**

(iii) Name the organs that produce these hormones. **[1]**

Q10. What is germination? Name the parts of a seed that take part in it, and give the role of each. **[3]**

OR

How does reproduction help to keep the populations of species stable?

SECTION D

5 marks

Q11. Answer the following: **[5]**

(i) How do small errors in DNA copying lead to variation? Why is variation useful? **[2]**

(ii) Explain three methods of vegetative propagation used by gardeners. **[3]**

OR

(a) What are sexually transmitted diseases? Name two caused by bacteria and two caused by viruses. [2]
(b) How can their spread be prevented? [1]
(c) What happens when the egg released by the ovary is not fertilised? [2]

SECTION E

4 marks

Read the passage and answer the questions that follow.

Q12. When a Planaria is cut into several pieces, each piece grows into a complete organism. Specialised cells in the body divide to make large numbers of cells. These then change into the various cell types and tissues in an organised sequence, called development. This is known as regeneration. **[4]**

(i) What is regeneration? **[1]**

(ii) Name one other organism that shows regeneration. **[1]**

(iii) Why can complex animals like humans not reproduce by regeneration? Is regeneration the same as reproduction? **[2]**

~ All the best! ~
